

# The \$VERSE-utility Paper

 @TheUniverseDAO

## EPOCH I: Defining the \$VERSE

### ① \$VERSE \$Launch:

Whitelisted \$VERSE stakers and holders participate in Launchpad projects. With new additions and co-marketing initiatives we keep pushing the number of participants in your IDO up, thereby generating faith from x with x of the whole ecosystem.

For the Cosmos, By the Cosmos and Of the Cosmos.

### ② \$VERSE Ignition:

Can't smart that contract without Nodes, y'all.

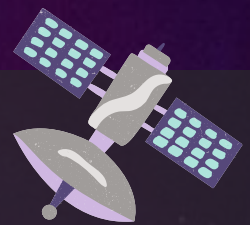

With the \$VERSE Ignition Nodal and Validators Structure Setup, we're bringing you the best in ChainOps across upgrades (on Cosmos), chains in the MetaVerse and expertise in years to give you the healthiest of UpTimes.

### ③ \$VERSE Thrust:

Struggling to get into the Top 100 Active Validator subset for popular chains like \$JUNO and others?

We've been there, and so the \$VERSE thrust helps give you a leg up with initial delegations to get into those active sets for a capped period of time.

### ④ The \$VERSE Space Pods:

Different platform integration giving your team the Space Blues? Never fear, The \$VERSE Space Pods are here. Filled with Developer and Product help from CosmWasm, Rust, help standing you up with partners like Junoswap, Osmosis, Keplr, Cosmostation and navigating the waters of the Tendermint consensus, we gotchu.

### ⑤ The \$VERSE Asteroid Network:

Tokens minted but not LPed often get dumped. Let our star-like partners help list, partner, shill, co-market, pair pool and find synergies with you - we're talking Evmos, Juno & frens, Osmo & frens, Validator frens, NFT frens and more!

Everything is always better with frens.

**Come float with us. Helmets & Spacesuits included!**

## EPOCH II: Expanding the \$VERSE

### ⑥ The \$VERSE Lunar Eclipse:

It's time to upgrade things now that the MVP Rocket is back safely. Enter \$LUNA.

When we picked \$UST as our primary stablekron, oops... stablecoin, it was an easy segue into supporting the Terra ecosystem and therefore, \$LUNA and associated tokens.

Bringing interoperability to Launchpads is something we've wanted to do and this is just the beginning.

### ⑦ The \$VERSE Milky Way:

As is becoming of Milky Ways, their several stars, planets, comets, asteroids, space cadets and dark matter come together to coexist.

The \$VERSE introduces Synthetic tokens that start off with simple s\$VERSE for liquid staking, but move on to doing so much more. Think financial offerings without having to touch your native staked/LP'd token. Think growth and compounding. This \$VERSE-utility.

Here's a small primer from a third-party on introducing you to the concept. But fret not, space cadets will do more to write Launch GuideBooks on these as we go along. Just strap in for the \$sVERSE journey.

### ⑧ The \$VERSE Black Hole:

It's not enough to float your token today. Token health suffers in the long run as treasuries are put to work and long-term astronauts feel jaded trying to uphold their token prices.

The very \$VERSE-atile Tokenomics are here to help you concoct liquidity diagrams and connections with AMMs, Market Makers, DEX partners, LP strategies, liquid staking, DAO treasury handshakes and more - thereby helping produce a steady vortex of Liquidity for the DAO and degen staking.

Helmets on, Meta\$VERSEians, we're in it for the long haul.

### ⑨ The \$VERSE Galaxy: The Renunciation:

All good things come to an end.

Do they have to? We think not - they just get bigger and better.

It has never been our Lean Pod's aspiration to do-it-all ourselves. Now that we've stood up a sound product, it's time for \$VERSE-DAO to do its thing!

We pledge to eject from our cockpits and settle on a neighboring asteroid while we're heads-down-and-continue-BUIDL, but we encourage the community to take our designs, our setups and grow it further. More on this, by Q4 2022.

*To chat further, join our DAO, launch a product on our Launchpad, partner with us or just say "Houston we don't have a problem", we're always helmets-on at [support@universedao.io](mailto:support@universedao.io)*
